

Half-day Industrial Application Testing Service

US Centrifuge Systems offers sample testing to help customers assess feasibility of applications. This testing procedure provides a quick and inexpensive way to evaluate an application. US Centrifuge Systems processes samples at company headquarters located in Manlius, NY. The manual cleaning centrifuge model M512, high-speed model Mac260 and C5 lab centrifuge are used to determine results, which are then noted and digitally photographed for customer review and consideration.

Example video on [YouTube.com](#)

Check to approve video of testing posted to the US Centrifuge Systems Channel with your company identity.

Emailed photo documentation

- Raw liquid sample (solids percent and volume)
- Centrifuged liquid sample (solids percent and volume) determines separation results
- Sludge cake sample

Characterization testing fee:

- \$500 per sample
- Laboratory test results are available per the lab cost if requested

Characterization testing requirements:

- MSDS is required to be emailed or faxed and approved for shipment prior to shipping any and all material.
- Completed US Centrifuge Systems sample industrial application must be emailed or faxed prior to testing samples.
- Payment to cover testing fee is required prior to shipping samples to US Centrifuge Systems.
- Return shipping instructions must be included for all samples or a prearranged environmental fee will be added to cover disposal.
- Two 5-gallon buckets with representative sample is preferred.
- Each 5-gallon bucket must include the necessary MSDS sheets and a copy of the US Centrifuge Systems Sample Testing Application Request Sheet.
- Testing is typically processed within a couple of days of receiving the sample and information (please notify US Centrifuge Systems is material is time sensitive).
